

## Final Project Presentation Feedback for Bilal

Feedback from the Class:

Very neat! Really interesting. Really engaged with the audience.

Fantastic delivery! Clearly knew your presentation. Great enthusiasm and clarity.

Did the US have different topics from India/Pakistan? Unclear on findings.

More detail on the results you got would be helpful. Can you name the topics?

Does finding the word “misinformation” suggest a greater awareness of a problem?

How did you pick 6 topics? (For like every country)

Can you explain why the topics have different numbers of words? How does it decide that?

Comparing the countries more could be useful. Do you think there are continental/regional differences too?

Did you have any insights into what organizations were spreading misinformation?

Could you refresh us on the limitations in the report?

Neat idea to see what LDA might suggest about how to tackle the problem of misinformation in different countries

Any way to check East versus West? (unclear if they meant in the US or across world)

Feedback from Prof. Wagaman:

Bilal, you have a very strong set of presentation skills, so this went very well. You went a tiny bit over at 8:17, but not very far. Overall, the slides were well-organized, but your classmates wanted some clarification/more clear statement of findings. For example, can you actually “name” any of the topics you found. A few comments from me follow. First, be careful with wording – you discussed a “test”, which in stats is a hypothesis test which wasn’t a test, a “spatial analysis” when you just meant a map, and “correlation”, which in stats is a statistic to assess linear relationships between quantitative variables, when you probably meant association instead. Your classmates wanted some more details of the LDA – such as how you chose the number of topics and what topics you actually found – I agree this would be good to include. Finally, I would check the graphic size in the report (you knew some parts were small). You can tell it to print the first 3 in one graphic and the second 3 in another or similar, so you can get everything to be readable. Let me know if you have questions.
